

Filename Magic v1.00

L5 Software Group, LLC

System Requirements

Filename Magic is designed to run on the following i386-based platforms:

- Windows 98se
- Windows ME
- Windows NT 4 with Service Pack 6a, Windows NT 4 Server with Service Pack 6a
- Windows 2000, Windows 2000 Server, Windows Advanced Server
- Windows XP Home, Windows XP Pro

The only disk space required is the space used by the executable (~696KB). The total size of all files in the package is ~1.2MB. The memory requirements are the same as those made by the operating system on which Filename Magic is run. Filename Magic requires no other special software or hardware to run.

Purpose

Filename Magic is a tool designed to allow System Administrators, Power Users and Developers an easy means to rename and modify files and their information on Windows 98se, Windows ME, Windows NT 4, Windows 2000 and Windows XP platforms.

It is up to the user to understand the ramifications of their actions when using Filename Magic. Modifying a file may lead to a machine being unable to boot or run properly. The L5 Software Group bears no responsibility for problems resulting from the misuse of this software.

Installation

Filename Magic comes with an installer that will recognize and install the proper files for the OS environment it is being run on.

Filename Magic and 98se\NT4

In Windows 98se and Windows NT4 under the extended settings tab, rename file destination, copy then rename files option; the option to create a new folder will not be present. This is due to a common control that is not present in these two OS environments. At the current time we do not feel the need to produce separate versions for these older OS environments. If you want to have renamed files put in a folder other than the source folder in these two OS environments, you will need to create the folder outside of Filename Magic and then browse to it once in the program.
